Summary

I consider myself a System Administrator (although I don't work full time on it) with the mindset of a Software Developer (they call that "Site Reliability Engineer"). These last few years I have mainly focused on SRE and DevOps type things, although I am the type of person who naturally tries to solve any problem that he encounters. With interest in working with software and open source projects. Committed to using my technical and personal skills to help clients design, build and maintain their systems and build a trusting relationship with them in order to meet or exceed their expectations.

Professional Experience

ITC Soluciones | Systems Analyst - December 2010 - Present
Help Desk and attention to the end user, resolution of incidents. Installation, configuration and maintenance of communication systems. On-Site IT Support. Maintenance and monitoring of Servers and Communication Gateway.
